Andrew Hansford

Innovative. Visionary. Leadership. Transformative.
Morrinsville, Waikato, New Zealand

Summary

I am passionate about driving innovation and transforming ideas into tangible business improvements. With nearly two decades of experience, I bring a unique blend of technical expertise and people-centred leadership across Programme & Project Management, Delivery Management, Solution Consulting, GIS specialisation, and Technical & Data Analysis.

My leadership style is grounded in servant and coaching principles. I focus on empowering people, building trust, and creating calm, high-performing environments where teams can do their best work. I believe strong outcomes follow when leaders remove barriers, provide clarity, and enable others to succeed — ultimately working themselves out of a job by uplifting capability.

Throughout my career, I have developed a holistic understanding of how people, data, processes, and technology intersect to create value. I thrive in collaborative, fast-paced environments and am comfortable leading through ambiguity, consistently delivering meaningful outcomes even under pressure.

Known for my ability to think outside the square and see the big picture, I help teams simplify complexity, challenge assumptions, and turn strategy into action. I am often trusted as an advisor to senior leaders, bringing clarity, structure, and pragmatic thinking to complex problems.

As an individual with ADHD, I embrace this as a leadership strength. It fuels my curiosity, creativity, and pattern recognition, enabling me to connect ideas others may miss and adapt quickly to change. Combined with empathy and intuition, this allows me to build strong relationships, foster psychological safety, and guide teams through complex challenges with confidence.

My focus is always on delivering meaningful outcomes, building high-performing teams, and creating sustainable improvements that continue long after I've moved on.

Experience

Zero In On

Founder | Strategic Delivery Specialist | Business Improvement

March 2022 - Present (4 years 5 months)

Hamilton, Waikato, New Zealand

As Founder of Zero In On, I partner with organisations to navigate complexity, drive meaningful change, and turn ideas into practical, deliverable outcomes. My approach is grounded in clarity, honesty, and a strong focus on execution — ensuring strategy doesn't just sound good on paper, but works in the real world.

I specialise in strategic delivery, programme management, and business improvement, drawing on nearly two decades of experience across complex initiatives and operational environments. I'm known for a straight-to-the-point communication style that builds trust with stakeholders and keeps decision-making transparent, focused, and outcome-driven.

Zero In On brings together systems thinking, process design, data and technology insight, and people-centred delivery. This is reinforced through The Print Lab — a hands-on capability where concepts are tested, refined, and validated through design, iteration, and physical prototyping, reducing uncertainty before scaling or implementation.

By combining strategic perspective with practical delivery, I help organisations make informed decisions, manage risk effectively, and deliver solutions that are sustainable, fit for purpose, and aligned with long-term goals.

Health New Zealand | Te Whatu Ora

Systems Improvement Lead

May 2026 - June 2026 (2 months)

Hamilton

Working as an embedded Systems Improvement Lead (BA-style) within the National Public Health Service, Te Manawa Taki region, contributing to a significant regional programme to strengthen accountability and coordination for overdue and at-risk childhood immunisations.

This role sits at the intersection of people, process, and technology — leading discovery and gap analysis work across six districts to understand current-state coordination models, clarify roles and responsibilities, and identify where the system is letting tamariki fall through the cracks. A core focus is equity: around 80–90% of the tamariki missed each quarter in the region are Māori, making culturally responsive systems change central to everything we do. Day-to-day work includes stakeholder engagement across PHOs, Hauora Māori services, outreach providers, and public health teams; process mapping and documentation; RASCI/RAIDD frameworks; and supporting the region's progress toward the national health target of 95% of tamariki fully immunised at 24 months by 2030.

Auckland Transport

Senior Project Manager

October 2024 - February 2026 (1 year 5 months)

Auckland, New Zealand

Leading strategic, multi-vendor initiatives focused on digital transformation, operational efficiency, and data-driven decision-making across Auckland's transport ecosystem.

Key Achievements:

Digital Twin – CRL: Established a foundational digital twin framework and governance model. Delivered a BIM data integration strategy, defined lifecycle management processes, and developed an implementation roadmap enabling scalable future adoption.

Traffic Optimisation: Successfully delivered Phase 1 in partnership with Google and NGIS, leveraging AI-driven analytics and real-time traffic data to optimise signal timings. Achieved cross-platform data schema compatibility and identified key datasets (e.g., boardings and alightings) to support predictive modelling. Currently preparing Phase 2 and commencing a pilot with Microsoft and Parsons to advance network-wide traffic management capabilities.

Web Application Migration: Managed the seamless migration of critical legacy web applications to a modern, secure cloud platform, improving system performance, scalability, and user experience while mitigating operational risks.

Fare Review: Led the data and analytics workstream, setting up secure analytical environments, managing risks and issues, and ensuring high-quality outputs were delivered under tight deadlines. Provided evidence-based recommendations to support future fare structure decisions.

SealesWinslow Limited

Technical Services Manager

June 2023 - September 2024 (1 year 4 months)

Morrinsville, Waikato, New Zealand

Managing core systems and applications including Operation Technology

Coaching and Mentoring Senior Systems Analyst.

Improving Business Processes
